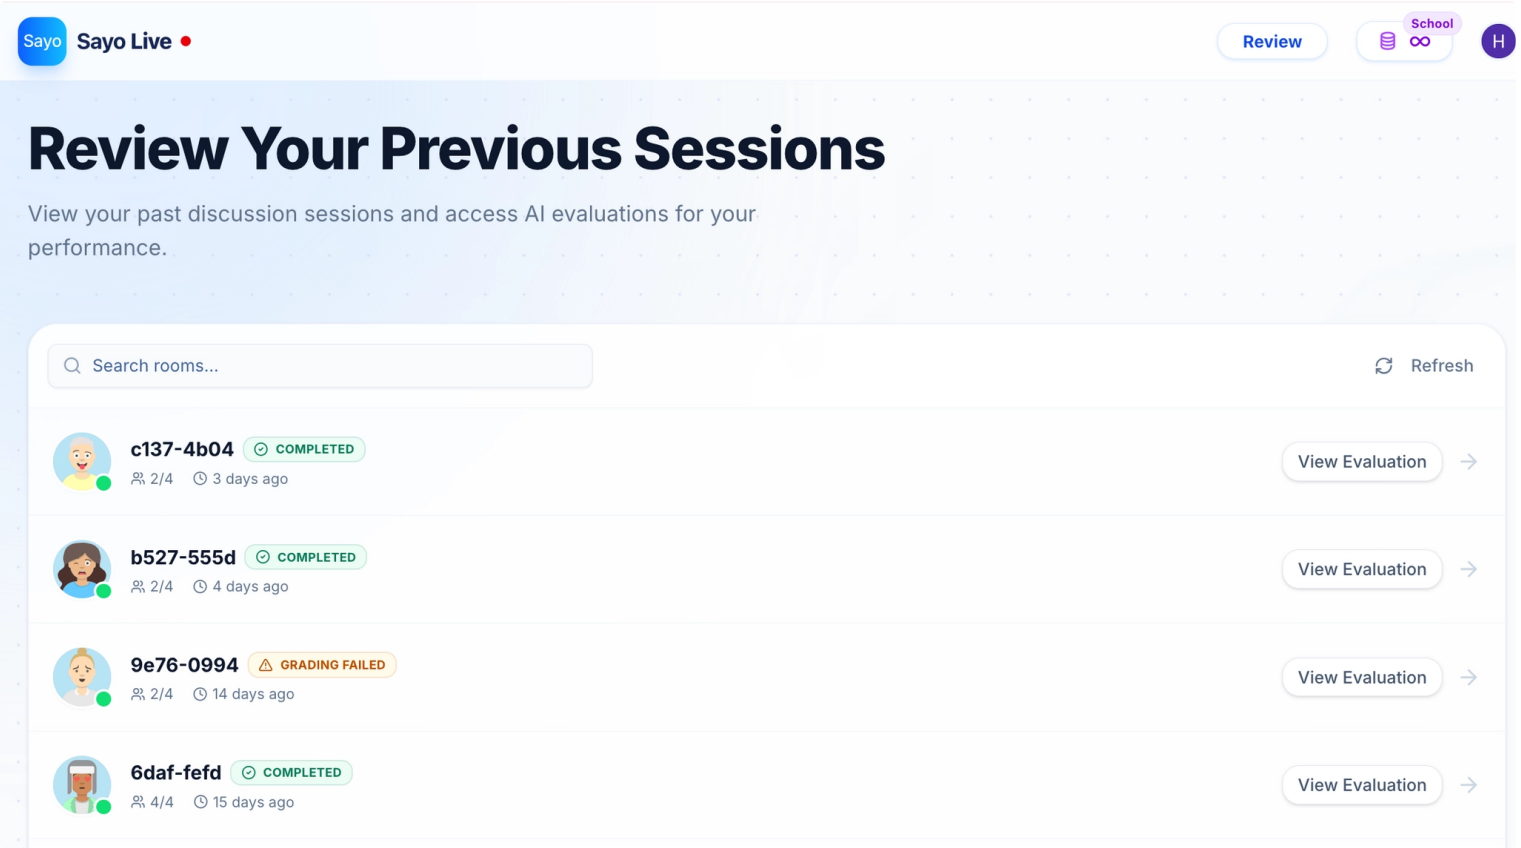
Reviewing Your Performance

After completing your discussion, you'll receive instant feedback to help you improve. Here's what you can expect:

For Students: AI Performance Report



Once the 8-minute discussion ends, the AI will automatically generate a personalized performance report for you.

Your report includes:

- **Overall score** based on DSE assessment criteria

- **Detailed feedback** on four key areas:
  - **Delivery:** How clearly and confidently you spoke
  - **Ideas:** The quality and relevance of your contributions
  - **Interaction:** How well you engaged with others
  - **Language:** Grammar, vocabulary, and accuracy
- **Engagement metrics** such as talk time and eye contact

Overall Group Performance

NEEDS IMPROVEMENT

> *"This discussion was highly problematic, characterized by significant procedural delays and vastly unequal participation levels that undermined the group's dynamic. For the first two minutes, candidates 1, 2, and 3 were confused about the task requirements, failing to initiate the topic and wasting valuable time on procedural talk. While Gordon Lui (Candidate 2) eventually launched the discussion with a prepared-sounding, albeit slightly academic, introduction and Hazel Lau (Candidate 3) attempted to maintain the flow, the group failed to function as a cohesive unit. Ian Wong (Candidate 1) was nearly invisible, offering only minimal, generic remarks that lacked the depth required for a Grade 12 assessment. Saman Dar (Candidate 4), while offering the most insightful and analytical perspective by challenging the 'housing-only' narrative, spoke for less than a minute in total. This extreme lack of sustained on-topic speaking time from half the group, combined with the initial two-minute stall, results in a 'needs-improvement' rating. The discussion lacked genuine interactive development, with participants often reading off points or providing isolated responses rather than engaging in a nuanced, critical debate."*

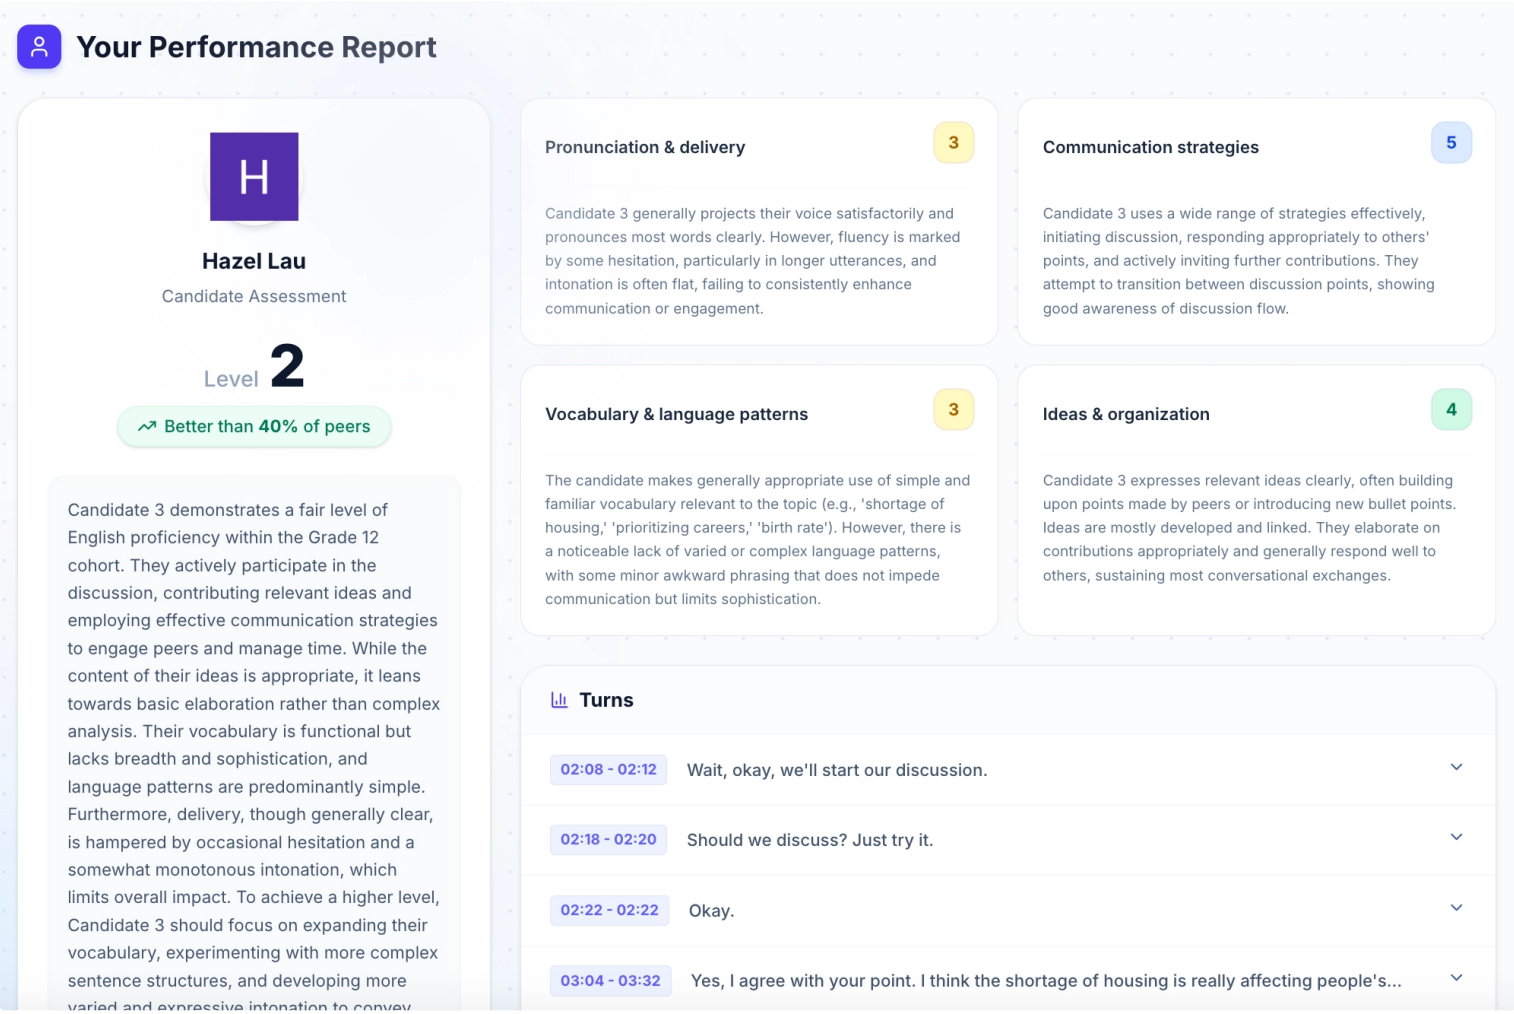
Key Strengths

- Gordon Lui (Candidate 2) utilized a strong range of academic vocabulary (e.g., 'stark picture', 'demographic future', 'career autonomy') to frame the socio-economic issues.
- Saman Dar (Candidate 4) demonstrated superior critical thinking by offering a counter-argument to the housing issue, introducing psychological factors and using

Area for Improvement

- Candidates must take immediate initiative to start the topic rather than wasting nearly 30% of the discussion time on procedural questions and waiting.
- Ian Wong (Candidate 1) needs a significant increase in on-topic speaking time and must move beyond basic agreement to develop his own complex ideas.

Discussion Timeline



💡 **How to use your report:** Review your scores and read the AI feedback carefully. Focus on one or two areas for improvement in your next practice session. Track your progress over time by comparing reports from different sessions.

For Teachers: Full Playback & Review

Teachers have access to additional tools for providing personalized guidance.

What teachers can do:

1. **Watch the full recording** of the entire discussion session
2. **Observe key details** that help inform feedback:
   - Student interaction patterns and turn-taking
   - Body language, facial expressions, and eye contact
   - Strong moments worth highlighting
   - Areas that need improvement
3. **Provide personalized feedback** to each student based on:
   - The content of their contributions
   - Their delivery and communication style
   - Their participation frequency and timing

✨ **Benefits for teachers:** Review multiple practice sessions at your convenience without needing to sit in on every discussion. Give targeted, evidence-based feedback that helps students improve faster.
